**BabEng** (formerly “Babendererde Engineers”) is a worldwide engineering

and consulting company specializing in underground works. We support projects involving tunnel boring machines (TBMs), whether for highly mobile pipe-jacking projects or for large-diameter traffic tunnels in challenging geological conditions, during all phases – from feasibility study to design and from construction to contract closure.

In need of efficient software to control the tunnelling process BabEng created the division Tunnelsoft. Tunnelsoft’s main product TPC (Tunnelling Process Control) is the all-in-one solution for data management and excavation monitoring. From day one, we ensure the efficient fulfilment and monitoring of your tunnelling project throughout all project phases. With the assistance of TPC, all mechanical processes, geotechnical measurements and similar data are strictly monitored and controlled. Its unique flexibility, combined with powerful automatic reporting and notification tools makes it the leading solution in the market.
