Web site: <https://www.wsp.com/en-gl/hubs/tunnels>

WSP's achievements over more than a century cover a wide array of tunnels in conditions ranging from soft ground, mixed-face and hard-rock conditions to cut and cover tunnels and immersed tube structures.

From program management to design to construction management, we serve clients in the rail, highway, water, utilities, mining, scientific research, renewable power and energy sectors. Our designs have resulted in record-setting advances with tunnel boring machines (TBMs) and we have employed innovations to reduce overall project cost, such as the development of fiber-reinforced concrete segmental liners for these drives.

In executing its tunneling projects, WSP draws on the multidisciplinary resources of over 66,000 employees in more than 500 offices across 40 countries worldwide.
